

NEW!

CALMA PUMP SERIES
SETTING A NEW STANDARD FOR NOISE

THE POWER OF CALMA

Low noise across a wide speed range

Concentric is a specialist in hydraulic gear product technology. The company has a long standing tradition of developing gear products that meet the unique needs of specific markets and applications. In the electric vehicle markets low noise operation across a wide speed range is a key requirement. This capability enables operator comfort and improved control and positioning for various vehicle functions.

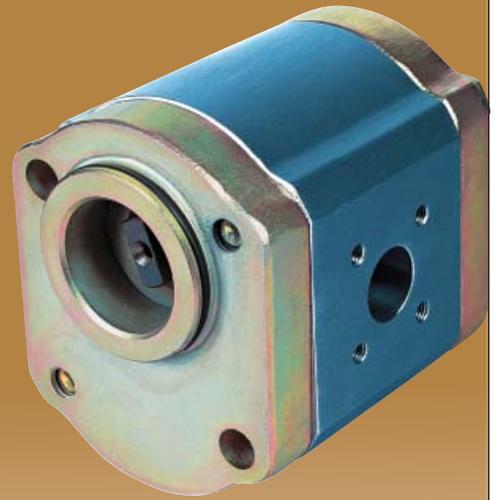

Concentric established itself as a leader in low noise gear products a decade ago when it introduced its WQ series (quiet) gear pump product line featuring dual flank engagement of the gear teeth to reduce the amplitude of the pressure pulsations introduced into the hydraulic system. The size of the pressure pulsation from the pump determines the pump noise levels.

Now Concentric is introducing the Calma Series which sets the new standard for low noise operation. Available in displacements from 6,2cc – 23,7cc the Calma pump's pressure pulsation is minimized to 25%. Calma's efficiency, wide speed range and low noise performance are the result of extensive research and development.

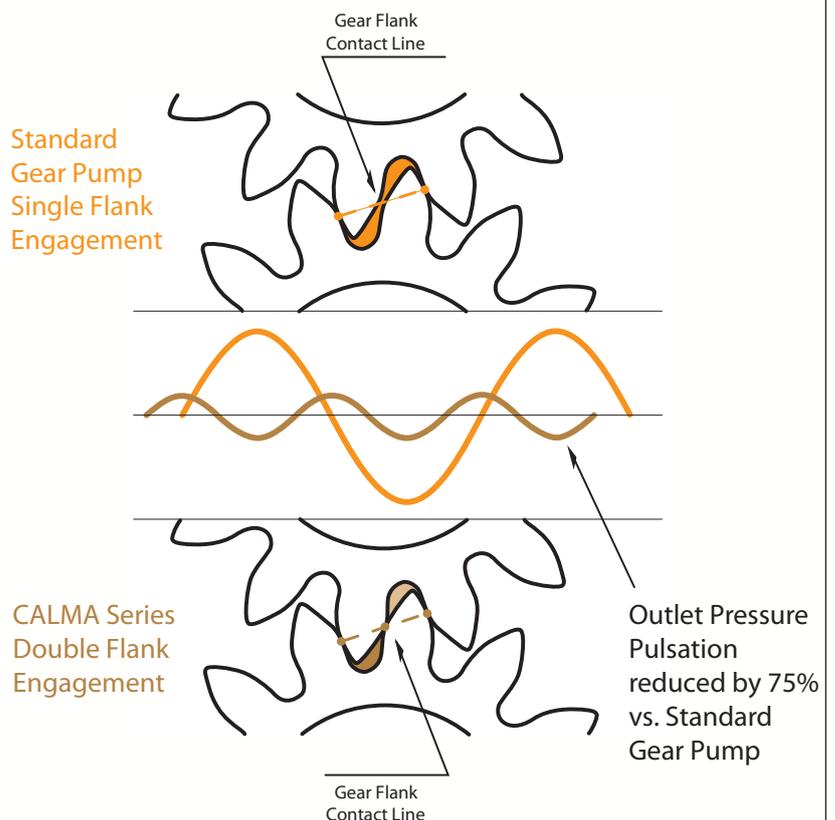

Calma is especially well suited to applications on electric counterbalanced lift trucks, warehouse lift trucks, electric aerial work platforms and other mobile equipment where low noise, low speed and high efficiency are required.

Calma Pump Features:

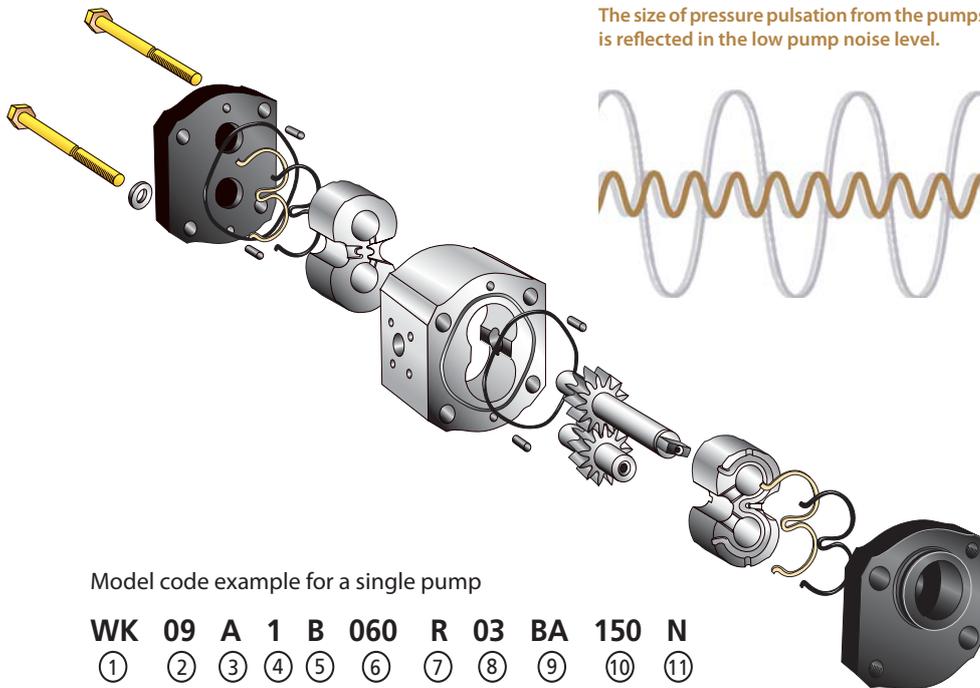

- 97% Typical Volumetric Efficiency
- Wide Speed Range
- Substantial Noise Reduction
- Pressure Pulsation Reduced by 75%
- A newly engineered tooth geometry
- An innovative approach to gear flank engagement
- Reduced trapped oil volume
- Compares favorably with more expensive internal gear pumps on efficiency and low noise operation

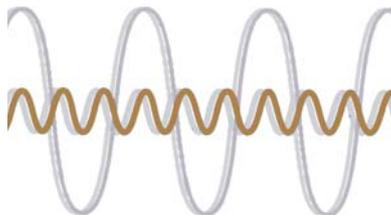

Calma Series vs. Traditional Gear Pump

Pictures on above are used with the kind permission of eg: Atlet, BT, Huddig, Scania, Toro and Volvo Construction Equipment. The right to modifications for technical improvements is reserved.

Pressure pulsation reduced by 75%.
The size of pressure pulsation from the pumps is reflected in the low pump noise level.

CALMA DESCRIPTION

The key performance features of Calma are its low noise operation over a wide speed range. Like its predecessor the WQ pump Calma is a three piece modular design. The pump body is manufactured from high strength aluminum alloy. The mounting flange and rear cover are of cast iron.

The Calma pumps come in single or multiple configuration of up to four sections.

For optimum strength, gears and shafts are precision machined in one piece. The 13-tooth gear geometry has been optimized for low noise level.

All shaft bearing surfaces are Teflon® coated and designed for long service life. They are continually cooled and lubricated by a controlled flow of fresh oil. This enables operation across a wide speed range at very high loads.

Multiple pumps in the Calma range are very compact. The drive shaft is capable of transmitting high torque even to the rear section. Each section has its own inlet and pressure ports. Single inlet features are optional for 2 and 3 section units.

A wide range of mounting flanges and port sizes are available to meet international standards.

General data

Displacement (V) 6,2 - 23,7 cc/rev
Wide Speed Range (WSR) (n) 400 - 4000 rpm

Pressure

Operating pressure (p_2) max. 250 bar
Operating temperatures (t) max. 105°C
Typical volumetric efficiency 97%
The maximum values for n, p_2 and t for a given pump specification may be applied simultaneously.

Options

- Mounting flanges - SAE, rectangular and through bolt.
- Shafts - Tang, spline, tapered or straight with key.
- Ports - Thread or flange.
- Rotation - CW or CCW.
- Integrated valves.
- Single inlet for multiple units.

PERFORMANCE DATA

Operating pressure range

Inlet port:
continuous, minimum -0,20 bar
intermittent, minimum -0,35 bar
maximum +2,00 bar

Outlet port (See tables on pages 6-9)

Speed range

Minimum speed for all pump sizes is n=500 rpm at maximum operating pressure. L (WSR) Wide operating speed range with low speed capability adds min. speed n=400 rpm at max. operating pressure.

Maximum speed for single pumps depends on the pump model in question and can be identified from tables on pages 6-9 for respective models.

Maximum speed for multiple pumps is the lowest one specified (See tables on pages 6-9) for any section of the configuration in question.

Noise performance data according to page 5.

Hydraulic Fluids

The use of HL- or HLP-hydraulic oil according to DIN 51 524 is recommended.

The **permissible viscosity** for all Calma pumps is from 750 to 10 mm²/s. The recommended operating viscosity range is from 40 to 16 mm²/s.

The **permissible cold start viscosity** is 2000 mm²/s. We recommend you contact Haldex before using fire resistant or bio-degradable fluids.

Viscosities (when operating at above temperature limits) have to remain within the range specified under "Hydraulic Fluids".

Temperature range

Ambient temperature min. -25° C
max. +80° C

Fluid temperature
continuous operation max. +90° C
intermittent operation max. +105° C

Please note

Fluid cleanliness

Fluid cleanliness according to ISO 4406/1999 [-18/14] or better is required in order to assure the pump's high level of efficiency in the long term.

Drive arrangement

Flexible couplings are preferred for direct drives. Please contact Concentric for indirect drive requirements. Pumps with outboard side load bearing are available.

Mounting position

As required.

Symbols

Single pump

Double pump

Triple pump

Quadruple pump

Calma Design - Two Versions

Design Code "A"

Calma WK9A (Standard Design)

Standard design offers low noise operations within the common operating speed range.

Size Code	Displacement cc/rev	Operating Pressure (P ₂) bar	Max. Speed rpm	Min. Speed rpm
060	6,2	250	4000	500
080	8,3	250	4000	500
110	11,3	250	3600	500
140	14,5	250	3300	500
160	16,5	250	3000	500
190	19,6	250	3000	500
230	23,7	210	2800	500

- Operating pressure P₂: max. 20 sec. loaded following 10 sec. minimum unloaded. Pressure rating at min. speed is max. 100 bar (intermittent).
 - Operating pressure rating refers to flanged port configuration (210 bar for threaded ports).
 - Viscosity: minimum 10 mm²/s

Design Code "L"

Calma WK9L (WSR Design)

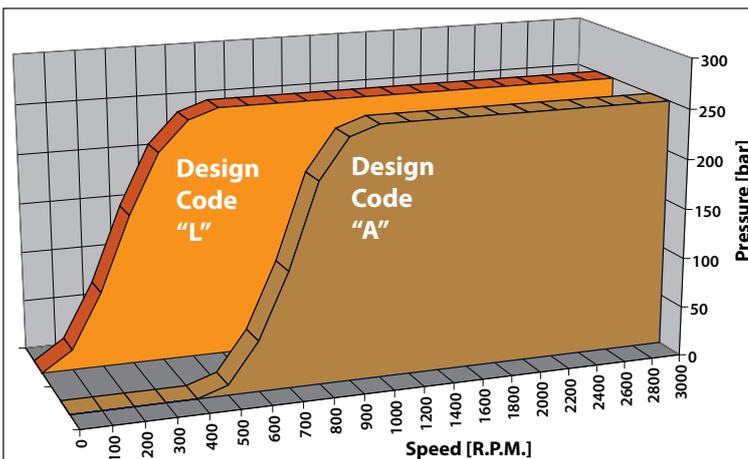

Wide operating speed range (WSR) offers low noise operation within the common operating speed range as well as additional low speed capability. This design incorporates additional side plates.

Size Code	Displacement cc/rev	Operating Pressure (P ₂) bar	Max. Speed rpm	Min. Speed rpm
060	6,2	250	4000	400
080	8,3	250	4000	400
110	11,3	250	3600	400
140	14,5	250	3300	400
160	16,5	250	3000	400
190	19,6	250	3000	400
230	23,7	210	2800	400

- Operating pressure P₂: max. 20 sec. loaded following 10 sec. minimum unloaded. Pressure rating at min. speed is max. 100 bar (intermittent).
 - Operating pressure rating refers to flanged port configuration (210 bar for threaded ports).
 - Viscosity: minimum 10 mm²/s

- Wide Operating Speed feature (Design Code "L") offers reduced minimum speed.
 Valid at P₂ operating pressure, max. 2,5 sec. load duration at 400 rpm.
 NOTE - Reduced operating pressure results in longer permissible load duration (> 2,5 sec.) and/or reduced speed < 400 rpm.

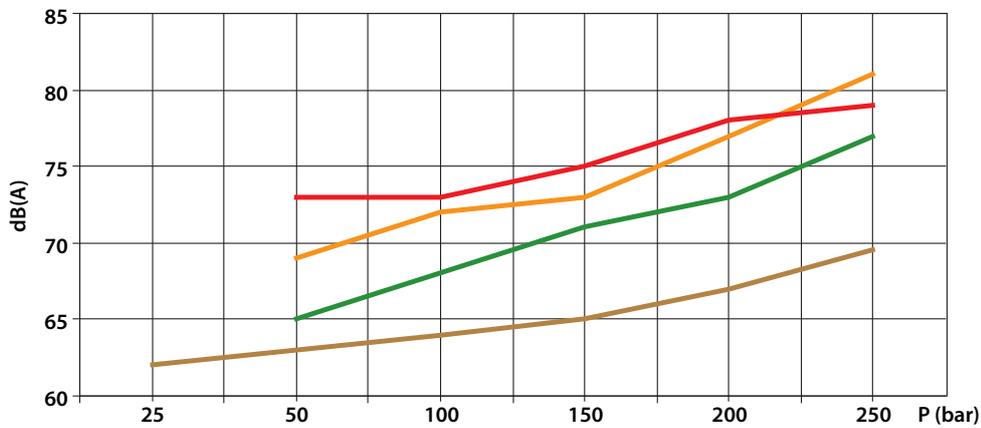

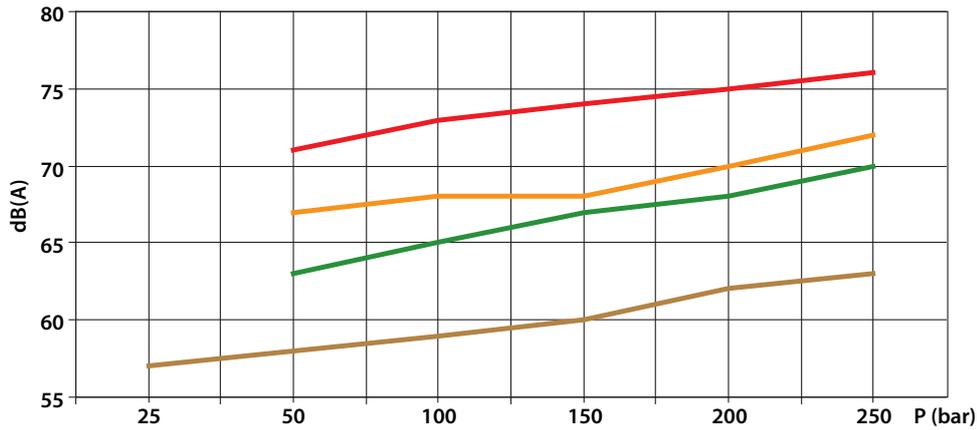

Permissible Pressure vs. Speed Capability

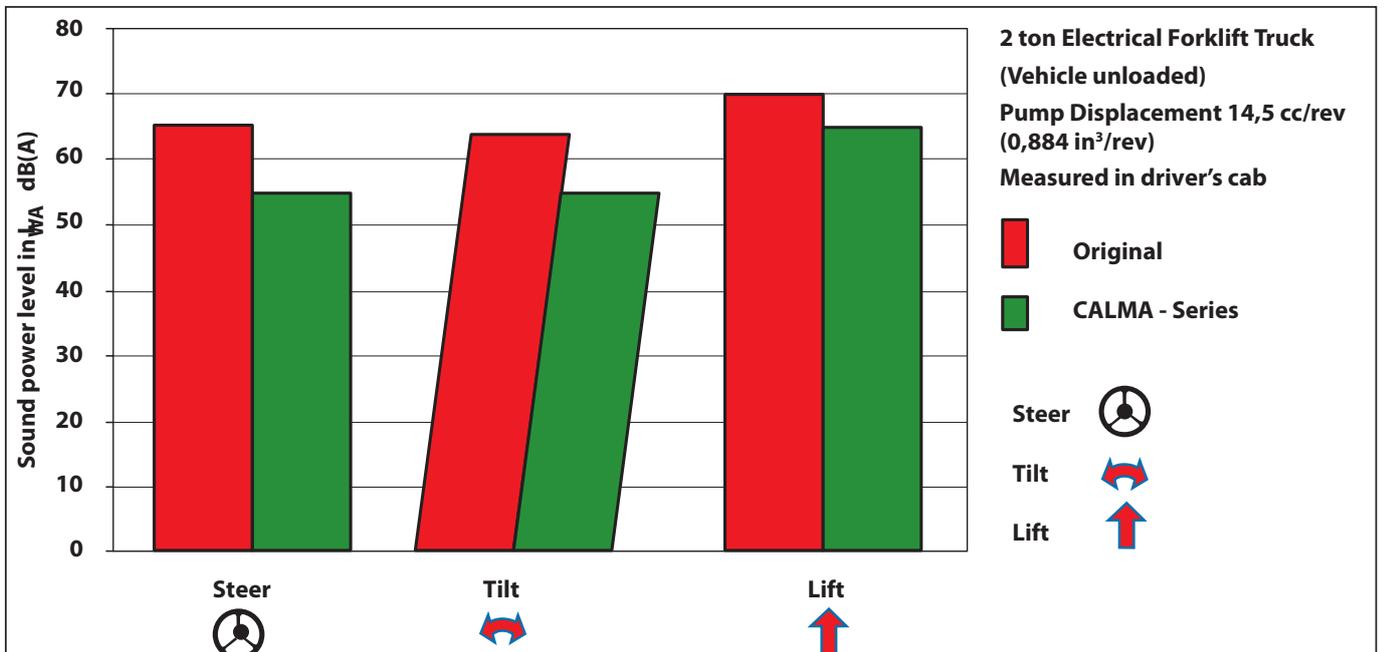

Concentric offers two different versions of Calma pumps:

- **Code Design "A"**
Calma WK9A. Standard design offers low noise operations within the common operating speed range.
- **Code Design "L"**
Calma WK9L. Wide operating speed range offers low noise operation within the common operating speed range as well as additional low speed performance and efficiency. The **L** option is ideally suited for applications like the steering idle mode on a electrical forklift truck. This design incorporates additional side plates.

230 - 23,7cc		2800	3500	4,9

MULTIPLE PUMPS

The two following parameters are of the utmost importance when selecting multiple pumps and must never be exceeded:
 - Drive shaft load index "A" in chart at right.
 - Internal coupling load index "K" in Coupling Loading below at right.

In multiple pumps, shaft end section must have largest displacement. Each consecutive section must have displacement equal to or smaller than section preceding.

MULTIPLE SECTION SHAFT LOADING

Max. drive shaft load index "A", see table below.

for double pump

$$A = (p1 \times V1) + (p2 \times V2)$$

for triple pump

$$A = (p1 \times V1) + (p2 \times V2) + (p3 \times V3)$$

for quadruple pump

$$A = (p1 \times V1) + (p2 \times V2) + (p3 \times V3) + (p4 \times V4)$$

Note: P = actual pressure in bar, V = applicable displacement from Table pages 6-9.

Drive Shaft	Load Index "A"	Drive Shaft	Load Index "A"
BA	10488	MB	10488
FA	5100	NB	10488
JA	6215	QB	5012

COUPLING LOADING

Max. load index "K" 5240:

for double pump

$$K = (p2 \times V2)$$

for triple pump

$$K = (p2 \times V2) + (p3 \times V3)$$

for quadruple pump

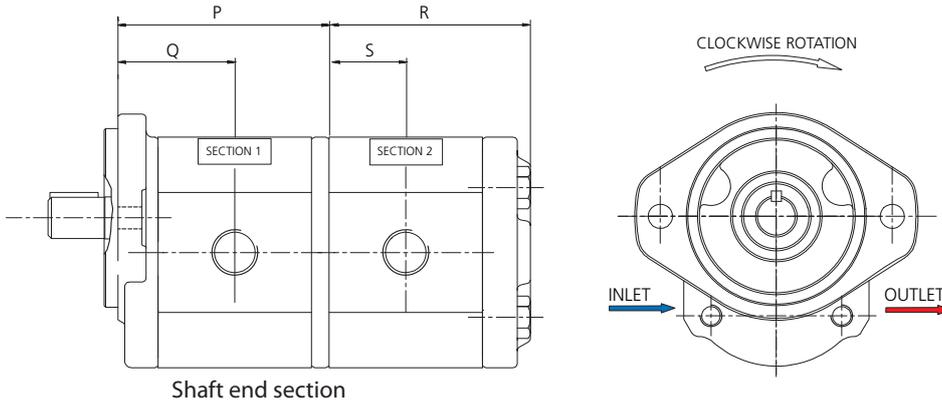

$$K = (p2 \times V2) + (p3 \times V3) + (p4 \times V4)$$

Note: P = actual pressure in bar, V = applicable displacement from Table pages 6-9.

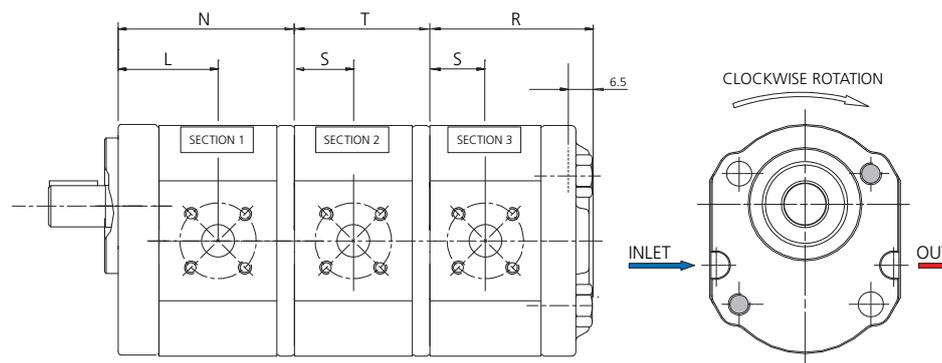

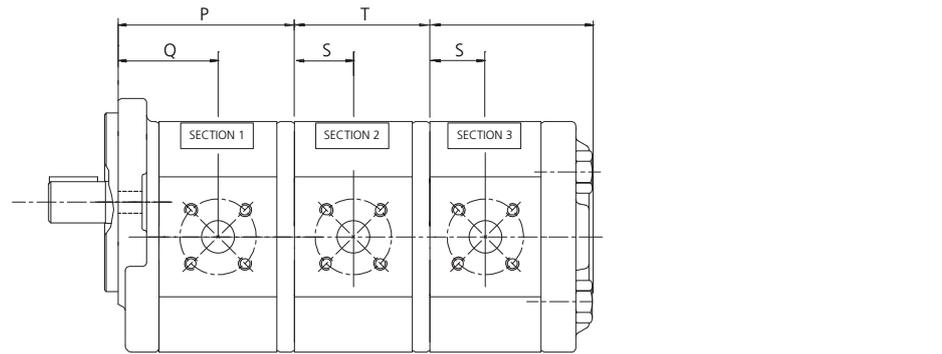

REDUCED INLET MULTIPLE PUMPS

Reduced inlets provide overall system savings by reducing the cost of redundant inlet hose and fittings. Contact Concentric regarding your reduced inlet multiple pump application.

Concentric multiple pumps are also available with reduced number of inlets. Please contact Concentric for details. Please contact Concentric for pump applications requiring independently sealed sections.

Shaft end section
